on P4P in the
SENSEI
eLearning tool

Building owners will benefit from better and more comfortable buildings, improved indoor climate, and a lower environmental footprint.

ESCOs will be offered an opportunity to increase revenue streams of energy efficiency projects through P4P programmes.

Energy providers are offered cost-effective options to ensure stability and adequacy of the energy system whilst pursuing decarbonisation.

Policymakers can benefit from recommendations on how to support increased investments in energy efficiency.

This project has received funding from the European Union's Horizon 2020 Research and Innovation programme under Grant Agreement No 847076.

The H2020 project SENSEI designs and tests innovative transaction models to enable **energy efficiency** upgrades within buildings. The key to these models is a concept named 'Pay-for-performance (P4P)', which verifies future cost savings to support financial planning.

Verifying cost savings is a novel feature separating the new P4P schemes from traditional models. The SENSEI project explores how to reward energy efficiency in buildings as an energy resource and grid service to help the market take advantage of this approach.

To guide professionals toward a better understanding of this concept, SENSEI offers an eLearning platform with tailored information
